Grade Band	Components	Persistence	UX	DX	Git
Starter	Basic meal record functions	Firebase storage	Navigation bar	Compose UI	Commit history
Baseline	User login/register	Firestore	Reusable UI components	Material 3	
Good	Search, custom food, analytics	Cloud database	Multi-screen data visualization	MVVM	
Excellent					

Additional Comments

This project is a calorie tracking Android application built with Jetpack Compose, Material 3, and Firebase. It allows users to register and log in with email and password, create a personal profile by entering age, height, weight, gender, and activity level, and automatically calculate daily calorie and nutrition targets based on that information.

The app also supports food search, custom food creation, meal logging by portion size and meal type, and displays daily intake records on a dashboard. In addition, it provides analytics features that help users review daily, weekly, and monthly nutrition trends, while all user data, food data, and diet records are stored in Firebase Firestore for persistent cloud-based access.
